

## CANARY WHARF

Products:

ERW-XL and EPC7460

Location:

Canary Wharf, LONDON

Canary Wharf Management first contacted BROMOCO as they had a problem with their stainless steel bollards browning and tea-staining (a form of oxidisation) which was unsightly.

After the completion of the restoration and protection system they decided to roll out a program of works to restore and protect many more areas on the island such as hand rails, lighting, bridges, gates and the world famous clocks outside Canada House.

ERW-XL is a concentrated deep cleaner for stainless steel and iron stain removal from most hard surfaces. Developed with a safe non-hazardous formula that gently removes browning and rust staining from stainless steel without damaging the surface or the environment.

EPC 7460A: EPC 7460A is a crystal clear, one part, air cured coating designed specifically for Stainless Steel. It provides high levels of protection from oxidisation, staining, fingerprints, browning, tea Staining, acid and bleaches
